

# The Environmental Performance Index and Animal Rights in 67 countries

**The Environmental Performance Index (EPI)** is a tool developed through collaboration between Yale University and the World Economic Forum (WEF) that is used to assess and compare the environmental performance of different countries. The EPI provides numerical ratings and rankings to countries based on their achievements in environmental protection and sustainable development.

**The key criteria considered in the EPI are:**

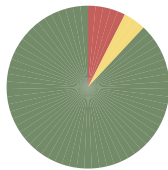

- air quality;
- water quality;
- health and sanitation;
- biodiversity and sustainable natural resource management;
- soil and landscape pollution;
- climate change and energy.

**The EPI allows for comparisons between countries, identifying best practices and helping countries improve their environmental protection efforts.**

Caring for the environment and protecting animals are interrelated goals. We contribute to a harmonious and sustainable world by caring for animals, respecting their rights and supporting conservation efforts.

## Any Laws Against Animal Cruelty

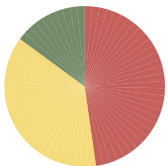

■ Yes ■ Partial ■ No

Choose the county: No items highlig..

Recognizing **the rights of animals** and their **capacity for emotion and suffering** is necessary to create laws that protect them from abuse and exploitation.

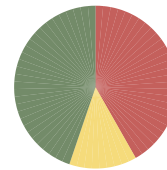

## Fur-farming ban

Introducing **laws against animal cruelty** and **banning fur farming** are key measures to ensure the humane treatment of animals and the conservation of wildlife.

**Support for the Universal Declaration of Animal Rights** reflects an international commitment to consider their welfare in decision-making and policy-making processes.
